# SYNTHETIC DEMO PAPER 2: SGD Classifier on Breast Cancer Data

**This is a synthetic demo fixture, not a real publication.**

## 1. Method

We train an SGD classifier with a learning_rate of 0.01, num_epochs of 30, and batch_size of 32 on the Wisconsin breast cancer dataset. We use a test_size of 0.25 for the split.

## 2. Results

Our model reaches an F1 score of 95.0% on the held-out test set.
